

Portabella (Portobello) (*Agaricus bisporus*)

Impressive in size and appearance, the Portabella mushroom is a larger, hardier relative of the White and Crimini and can range up to 6 inches in diameter. Portabellas have a longer growing cycle than Whites and Criminis resulting in a deep, meat-like texture and flavor.

Whole Portabellas (caps with stems) are generally available in 5 -pound containers. Portabella caps are available in 3-pound containers. Sliced portabellas are available 3-pound containers.

Whole Portabellas and Portabella caps should hold 7-10 days. Sliced Portabellas should be used with 5 to 7 days.
